

Jet Ski Docks

This is Australia's favourite Jet Ski Dock system.

These purpose shaped modules are designed for secure out of water jet ski and tinnie launching and storage.

The Superior Jet Ski Dock makes getting your PWC in and out of the water much easier giving you more time to enjoy yourself. It's also easy to attach the module to any existing berthing structure and will keep your craft high and dry making it the perfect storage solution too.

Like to use your Jet Ski more often?

Superior modular docking systems gives you peace of mind so you can enjoy more fun filled days out on the water instead of looking at your PWC sitting in your garage or driveway.

Imagine the convenience of being able to launch or berth your jet ski or tinnie easily in minutes. Simply steer your craft towards the groove and drive it up the dock. Alternatively steer your craft towards the groove then use the winch to haul your PWC onto the dock. This is why our docks are the best selling berthing solution of choice in Australia.

The modules can withstand harsh weather conditions and rough treatment and the textured surface has been designed to maximise slip resistance.

The jet ski dock can also be linked with rubber 'Dog Bone' connectors to our Ultimate Modular Dock system modules.

Please check out our website for more details about the UMD system.

Features

- Module size: 4.5m x 1.5m
- Versatile modular system
- Tough rotomoulded polyethylene
- Carrying capacity 450 KG
